Technology Student Association Webmaster Plan of Work Log (SM: Subrahmanyam Mullangi, MH: Michael Hellman, MS: Matthew Smith)

#	Date	Task	Time Involved (hours)	Team Member Responsible (Student Initials)	Comments
1	3/9/21	Research Medical Telecommunication field and companies	3	MS	Medical Telecommunication: Helps facilitate online appoinments, provides services for hospitals, offices, other healthcare providers, usually video conferencing software and a database provided
2	3/11/21	Generate file tree structure and topics for the website	1	MH	I shared a diagram that I think our page should follow on a google doc. The topics are based on the things that Matt was talking about and structures for most service-based sites.
3	3/14/21	Started creating framework: header and navigation bar	2	SM	I have a nav bar and file directory based on what Michael said with the file tree. I'm stumped on color scheme so I just put some default CSS colors. If anybody can find a good color scheme for the site, that'd be great
4	3/15/21	Creating a footer and body for the home page	1	SM	Created a footer with a mini navigation area and a contact us section
5	3/20/21	New Color Scheme	1	MS	New colors: Light blue #94a2e0, Dark blue #324bb7, off-white #eee (probably for the body), dark grey (probably for text) #323232
6	3/20/21	Creating other pages; Contact form	2	MH	I created the about, solutions, plans and pricing, and contact page. I also set up an HTML form on the contact page and styled it accordingly. New color highlights are commented in the main.css file
7	3/24/21	Writing content for solutions page	2	MS	Solutions content is being written for the site, using the research earlier and making some of my own solutions the company can provide to make it unique in the medical telecommmunications industry
8	3/29/21	Re-format header section	3	SM	I made the title of the company in line with the actual navigation bar, moving the whole part down and restyling. I also am working on making the nav-bar sticky, but just a possibility.
9	3/30/21	Revert and re-format header section	2	SM	Change of plans: the reformatting with the inline company name and nav bar doesn't look as good, so I reformatted the header back to something closer to the original. I also am now using a flex display so that the header is more responsive.
10	3/30/21	Fill in the solutions page with content	2	MH	I am using Matt's content from earlier and plugging that into the solutions page. I need icons of: a phone, a computer, a medical tool (endoscope, blood pressure cuff, or pulse oximeter), and a clipboard.
11	4/1/21	Logos and icons created	2	MS	On Notability: stethoscope logo, hamburger menu, computer, oximeter, phone, and clipboard drawn and shared to images folder in the repository
12	4/2/21	Implement solution icons	1	MH	Added Matt's icons to the webpage solution section
13	4/4/21	Implement Slick Image Carousel to home page	2	MH	We will use the Slick Image carousel library (MIT license, we are allowed to) on the front page of the site. I already added necessary javascript (with jQuery) and divs into the html.
14	4/5/21	Fill in Plans and Pricing page	3	SM	Used Matt's research, created plans and pricing tab with Ultimate and Basic plans, and the solutions discussed in Solutions tab
15	4/5/21	Make photos for the carousel	1	MS	Photo of doctor on computer (Creative Commons) and of doctor's worktable (I took it) for the slick carousel. Edited in pixlr e and inserted into the repo.
16	4/6/21	Add images to slick carousel	1	MH	Added Matthew's photos into the Slick carousel on the home page.
17	4/7/21	Fill in about page (including references)	2	MH	I wrote a brief description about our company and linked to more pages for the about site. I compiled all the outside resources and added them to the bottom of the about page for our references section
18	4/7/21	Reformat header and include responsive navbar	2	SM	Tested breakpoints in Firefox and switched header from two bands to the logo and hamburger menu. Wrote javascript for clicking the hamburger (toggle class).
19	4/9/21	Set up Github Pages and publish site!	1	SM	On my account, the page url should be smullangi213.github.io
